- **SOUND**: Amount of noise or sound to hear
- **SIGHT**: Amount and type of lights and sights you will see
- **TOUCH**: Amount of extra or unusual stimulation your skin will feel
- **MOVEMENT**: Amount of movement for your body to feel OR amount your body needs to move
- **COMPLEXITY**: Amount of directions to read or steps to follow
THINGS TO KNOW:

**Stream Table:** This is fun, and very, very messy play! You will get your hands very dirty.
*Hint: There is running water to rinse your hands, then air dryers that will blow them dry.*

**Quake & Shake:** If you enjoy building, make sure you stop at this exhibit. Create buildings and see if they can survive an earthquake. This exhibit has some quiet sound and mild vibration.
*Hint: There is a red stop button you can push if you would like to stop the noise.*

**Earth Moves Under Our Feet:** This exhibit lets you to crawl through an open tunnel to see what an earthquake feels like underground.
*Hint: If you go in the tunnel there is an opening at the end, but you have to crawl over a bumpy surface to get there. You might hear loud sounds or feel vibrations once you’re inside.*

**Jump To Make A Quake:** If you like to jump and stomp your feet – stop here! Watch the screen and you can see the vibrations you make while jumping on the floor.
*Hint: Please be careful and jump on the floor in front of the sensor and not on the sensor itself.*

**Weather Station:** If you like making videos, or seeing yourself on screen, this will be one of your favorite things to do at the museum.
*Hint: When you are done in the recording booth, exit to the right to watch your video playing on the TV screen.*
