

1. Cut out pattern at the circles edge. 2. Fold paper at lines in order indicated. 3. Cut out all grey areas. Use an X-acto knife for inner details.

ROCKET/SPACE SHUTTLE

In 1926, Robert Goddard launched the first liquid-fueled rocket in history. The rocket, which traveled just over 40 feet into the air. One of the most important single events in the history of space exploration, Goddard's technology ultimately led to the development of the rockets that carried humans to the moon and deep-space probes to interstellar space.
